

Progress Report 3

The week of 4/7 to 4/13

Shanley Mullen
Jesse Rosart-Brodnitz

Status:

We are currently a little bit behind schedule, but it should be completed by next week.

Where we are:

Finalizing equations and putting assembled parts together in solidworks.

Where we should be:

By now we should have finished our 3D design and had the animation completed.

Key Points

- the VCR has been tested for data
- Modeling is mostly complete minus three components
- The equations to find the energy component have begun

As of right now, April 16th, we are a little behind schedule. By now we should have finished everything in Solidworks and should just be focusing on matlab. However we are still modeling. The measuring of the VCR is completed and the equations to find the total energy have begun.
