Progress Report 4 The week of 4/714 to 4/127

Shanley Mullen Jesse Rosart-Brodnitz

Status:

We are currently a little bit behind schedule, but it should be completed by the deadline.

Where we are:

Finalizing equations and putting assembled parts together in solidworks. We will be exporting from solidworks to matlab tomorrow.

Where we should be:

By now we should have finished our 3D design and had the animation completed. Along with all the simulink information.

Key Points

- The equations are halfway completed
- The model is completed and is about to be exported
- This project was very ambitious and we have had to simplify the system drastically.

As of right now, April 25th, we are a little behind schedule. By now we should have finished everything in Solidworks and matlab. However we are about to export our model. The equations for total energy are halfway completed.
